## 302 – Skype

I parsed the files manually in EnCase 6.12 and discovered that there were chat fragments in plaintext within the “chatsync” folder. In pursuit of determining how to parse the skype information quickly, I researched to see if anyone has ever parsed such information. I found that Mark McKinnon (<http://cfed-ttf.blogspot.com/2008/09/skype-log-parser.html>) developed a tool to parse Skype chat.

The tool is very intuitive.

Below are screenshots that depict how to use the program

I used this tool to parse the Skype chat files. After using the tool I verified that the chat dialog was correct. Below are the results of the tool:
